		<p>The greater part of five wards is what is called rolling land of a clay subsoil mixed with a quantity of small limestones and yields wheat of the very best quality when I say wheat I mean fall wheat as spring wheat in general does not yield well especially if drought come in the fore summer I feel fall wheat is the main crop in the ward. But this year it was very much killed out in spring I may say this year it is fully one third below average crop in this ward.</p>
